GLADIOLUS

The Gladiolus is one of the most decorative plants in the garden, and as a cut flower lends itself readily to any arrangement. If the spikes are cut when the lowest flower is in bloom, the others will open in succession and remain fresh a week or 10 days. No flower has gained more rapidly in public favor than the Gladiolus, this could not well be otherwise, for in addition to the great intrinsic merit of the flower it is hardy and blooms the first season from bulbs.

All Gladiolus, doz. 60c., 100 \$4.00

Mrs. Von Konyenburgh. A near approach to blue.

Byron L. Smith. Beautiful lavender pink on white ground, or solid shade.

Carmen Sylva. One of the best of the white varieties. A pure white except for slight violet markings deep in the throat. Tall, slender stem always straight, flowers well arranged on the spike. Many open.

Mrs. Frank Pendleton. Flashed salmon pink with rich purple blotch on the three lower petals. The most popular flower in florists' shops.

Crimson Glow. Perfect, very large, deep scarlet crimson flowers on a tall, strong spike.

Golden Measure. Very large, dark golden yellow, the best in the yellows.

Giant Nymph. La France pink, with creamy yellow throat, very large, wide open flowers, long spikes and flowers well arranged on the stem. This is without question one of the very best recent introductions.

Mrs. Fred C. Peters. Blue-lavender pink with purplish bluish in throat. Large flowers with long, erect stems.

Mrs. Leon Douglas. Ground color Begonia rose, striped with blue and brilliant scarlet. Lip is pale cream slightly speckled with ruby. The size of the flowers, we believe, is the largest in existence.

W. H. Phipps. La France pink overlaid with light rose salmon, lighter toward the center. Lower petals very faintly stippled and speckled with ruby. Flowers enormous. A masterpiece in Gladiolus.

Picardy (Palmer). Almost sensational flower of delicate apricot pink. The individual flowers are all extremely large, slightly ruffled and of heavy waxlike substance. Has created a sensation practically every time exhibited.

Betty Nuttall (Schlacher). One of the outstanding Gladiolus of recent introduction. Light coral with pale orange throat and light feathering of running. A beautiful, large flowered variety. Each set, doz. 15c., 100 \$5.00.

The flowers of this well-known tuberous-rooted plant are waxy white, double and exceedingly fragrant. They are very useful in bouquets and house decoration.

Double Owl Pearl. First size bulbs. Each doz. 10, 60c., 100 \$4.50.

GRASS SEED

FOR PASTURE AND MOWING

English Rye Grass (*Lolium perenne*). Produces a strong growth in 4 or 5 weeks after sowing. It cures into a hay that is rather hard, but having a sweet flavor and much relished by cattle and horses. Sow 60 lbs. to the acre.

Kentucky Blue Grass (*Poa pratensis*). A very widely distributed species and without a rival as a pasture grass. Being of perennial habit, it will, when established, last indefinitely.

Rough Stalk Meadow Grass (*Poa trivialis*). Makes an excellent turf and is used quite extensively in lawn and fairway mixtures, especially under trees or in shaded places. No doubt the best known grass for shade in this section of the country.

Red Top, Fancy Cleaned (*Agrostis vulgaris*). A highly recommended grass for permanent pasture and as meadow grass for hay. Red Top is especially valuable for sour and acid soils and meadow lands. Use 14 to 16 lbs. to acre.

Timothy, or Herb Grass (*Phleum pratense*). The standard hay of commerce. The excellent quality of the hay and the ease of culture make it valuable. It is adapted to most soils, but succeeds best on moist loam and clay. Timothy sown alone requires about 20 lbs. per acre; when sown with Red Clover use 15 lbs. Timothy and 5 lbs. Red Clover.

South German Bent (*Agrostis stolonifera*). Called Creeping Bent. Very fine leaved and of creeping habit. Forms close, dense turf. Used on fine lawns and golf greens. Lb. \$1.25.

Orchard Grass (*Dactylis glomerata*). One of the most desirable pasture grasses for stock and for shady places.

Red Fescue (*Festuca rubra*). It thrives on dry, sandy soils and remarkably well in shade, forming a good turf surface, especially valuable for lawn and golf course. It is the only fine-leaved Fescue, forming a dense, continuous turf.
